Peer reviewed version

Please check the document version of this publication:

- A submitted manuscript is the version of the article upon submission and before peer-review. There can be important differences between the submitted version and the official published version of record. People interested in the research are advised to contact the author for the final version of the publication, or visit the DOI to the publisher's website.
- The final author version and the galley proof are versions of the publication after peer review.
- The final published version features the final layout of the paper including the volume, issue and page numbers.

A Semantic Trust-based Recommender System using Trust Ontology

Soude Fazeli, Hendrik Drachsler, Peter Sloep

Abstract

This software provides a recommender system that first creates trust networks of users based on social data of users within a social platform (network) like rating, bookmarking, tagging, commenting, etc. Then, it traverses the trust networks to collect the recommendations for a target user. The output will be also written in OWL files for the purpose of visualization e.g. with Welkin tool.

Version & change log

Version	Date	URI
1.0	01-Jan-2014	

Source code

GNU Lesser General Public License (LGPL3)

git clone https://github.com/SoudeFazeli/Tindex_OWL.git

Installing the software

The application needs JVM to be running. For more information please see README file.

Dependencies

All the required libraries are already available under the lib folder.
